

Fast-Tract

Gluten Free Probiotic Liquid

A faster way to
intestinal health

15 times more
beneficial bacteria than
probiotic powders

Zesty sparkling refreshing
source of lactobacillus
bacteria

What Is Fast-Tract?

Fast-Tract is a refreshing, effervescent liquid; an active source of friendly lactobacillus bacteria and a natural source of vitamins, minerals, amino acids and enzymes. Fast-Tract is a high quality, probiotic liquid, produced through an entirely natural organic, fermentation process. Fast-Tract is formulated to achieve high, active levels of probiotic bacteria sustained in a ready, liquid medium immediately available for use within the digestive system.

Did You Know?

In-Liven, in powder form, contains approximately 40 million colony-forming units per gram, which is the limit that can be achieved in our powder formulas. With the Fast-Tract liquid formula, we have achieved more than 265 million colony-forming units per millilitre!

Why do we need Fast-Tract?

It has been well-documented that a good source of probiotic bacteria in the diet is helpful and that they are a natural part of the food chain. Modern diets include caffeine, sugar, simple carbohydrates, preservatives and overly-processed foods. All these factors can lead to reduced levels of probiotic bacteria in the intestinal system, providing an environment for putrefactive bacteria to dominate and lead to poor health. Including Fast-Tract in the diet regularly may help replenish the supply of probiotic bacteria and replace those lost through normal body functioning.

Why is Fast-Tract Gluten Free?

1% of the world's population is considered gluten intolerant. Fast-Tract is GLUTEN FREE, and is an excellent starting point for people who have food allergies and intolerances. For serious intolerances, we suggest you drink 50-75 mls a day for 10-14 days to assist the good bacteria to establish themselves in your digestive system, and then graduate to In-Liven.

How To Use It

Fast-Tract is recommended as part of every start-up program for great intestinal health. Drinking 30 to 50ml of Fast-Tract along with a teaspoon of In-Liven for the first 10-14 days can jump-start the good bacteria in the digestive system. Then every 3 months a clean-out regime using Fast-Tract along with 3 teaspoons a day of In-Liven over a 10-14 day period is recommended.

Drink Fast-Tract to fast track your intestinal health!
